

# CLIMAMAT ALPAS

## STORAGE AND POST-CURING CHAMBERS

**CLIMAMAT ALPAS** are air-conditioned storage and post-maturing chambers. They are tailored to customer requirements. The storage room is especially designed for the lower water activity of your products in the post-maturing phase. Our **CLIMAMAT ALPAS** is the perfect system to control the process in a safe and reproducible way.

**WE BUILD YOUR SOLUTION**

## FLOW CONDITIONS

In order to be able to guarantee the consistency of your products, the air flow conditions inside the chamber are of key importance. We recommend the system for production sites with very tall rooms and high capacities as well as products with a high content of moisture, associated high level of drying. The tried and tested air change flap system ensures a consistent flow of air, achieving virtually identical drying rates within each individual trolley and throughout the chamber.

# OPTIONS

## MICROMAT ANALYZER

The system reduces complex production processes and a wide-ranging distribution of installation components to a reliable & convenient general overview for the operator.

## ETHERNET CONNECTION

Messages are e-mailed to a defined e-mail distribution list.

## MANUAL FOAM CLEANING

A manual foam cleaning facility is available for cleaning this machine. This is also available with a pump as option.

## ADDITIONAL DUCT CLEANING

Additional spray nozzles in the injection duct achieve maximum hygiene.
